

Problema 2

The screenshot shows the CLion IDE with the file 'Codigo_Fuente.cpp' open. The code is a C++ program for a savings calculator. It includes `<iostream>` and uses the `std` namespace. The `main` function declares variables for the number of months (`meses`), monthly savings (`AhorroMensual`), total savings (`TotalAhorrado`), average monthly savings (`PromedioMensual`), and the month with the highest savings (`MayorAhorro` and `MesMayorAhorro`). It prompts the user to enter the number of months and then enters a loop to calculate the total savings for each month. After the loop, it calculates the average and the month with the highest savings.

```
1 #include <iostream>
2 using namespace std;
3
4 int main() {
5     int meses;
6     float AhorroMensual, TotalAhorrado = 0, PromedioMensual;
7     float MayorAhorro = -1.0;
8     int MesMayorAhorro = 0;
9     int MesesConMeta = 0;
10
11     cout << "Cajero de Ahorro Programado" << endl;
12     cout << "Ingrese la cantidad de meses a ahorrar: ";
13     cin >> meses;
14
15     for (int i = 1; i <= meses; i++) {
16         cout << "Monto ahorrado en el mes " << i << ": Q";
17         cin >> AhorroMensual;
18         TotalAhorrado += AhorroMensual;
19
20         if (AhorroMensual > MayorAhorro) {
21             MayorAhorro = AhorroMensual;
22             MesMayorAhorro = i;
23         }
24
25         if (AhorroMensual >= 500) {
26             MesesConMeta++;
27         }
28     }
29
30     if (meses > 0) {
31         PromedioMensual = TotalAhorrado / meses;
```

The screenshot shows the CLion IDE with the 'Run' window open, displaying the output of the program. The output shows the program prompt, the user input of 4 months, and the calculated results for each month and the summary.

```
"C:\Users\ferna\OneDrive\SFBA\Documentos\CLion\Tarea V - Estructuras de repeticion\Problema_2\Codigo_Fuente.exe"
Cajero de Ahorro Programado
Ingrese la cantidad de meses a ahorrar:4

Monto ahorrado en el mes 1: Q300
Monto ahorrado en el mes 2: Q450
Monto ahorrado en el mes 3: Q700
Monto ahorrado en el mes 4: Q600

Resumen de Ahorro
Total ahorrado: Q2050
Promedio mensual: Q512.5
Mayor ahorro realizado en el mes: 3
Meses con ahorro de Q500 o mas: 2

Process finished with exit code 0
