

# Problema 1

The screenshot shows the CLion IDE with the 'Codigo\_Fuente.cpp' file open. The code is a C++ program for calculating the average of five grades and determining the final result based on the number of passed and failed subjects.

```
1 #include <iostream>
2 using namespace std;
3
4 int main() {
5     float nota, total = 0, promedio;
6     int aprobadas = 0, reprobadas = 0;
7
8     cout << "Control de Calificaciones" << endl;
9     for (int i = 1; i <= 5; i++) {
10         cout << "Ingrese la nota " << i << ": ";
11         cin >> nota;
12
13         total += nota;
14
15         if (nota >= 61) {
16             aprobadas++;
17         } else {
18             reprobadas++;
19         }
20     }
21     promedio = total / 5;
22
23     cout << "Resultados Finales" << endl;
24     cout << "Suma total: " << total << endl;
25     cout << "Promedio: " << promedio << endl;
26     cout << "Notas aprobadas: " << aprobadas << endl;
27     cout << "Notas reprobadas: " << reprobadas << endl;
28
29     if (promedio >= 61) {
30         cout << "Resultado final: Aprueba" << endl;
31     } else {
```

The screenshot shows the CLion IDE with the 'Run' window open, displaying the output of the program. The program prompts the user to enter five grades, and the output shows the calculated average and final result.

```
Run
"C:\Users\ferna\OneDrive\SFBA\Documentos\CLion\Tarea V - Estructuras de repetición\Problema_1\Codigo_Fuente.exe"
Control de Calificaciones
Ingrese la nota 1:70
Ingrese la nota 2:55
Ingrese la nota 3:80
Ingrese la nota 4:60
Ingrese la nota 5:90
Resultados Finales
Suma total: 355
Promedio: 71
Notas aprobadas: 3
Notas reprobadas: 2
Resultado final: Aprueba
Process finished with exit code 0
```
